

# THE PROFOUND STORY

## The Beginning

In the early 2000's Profound Technologies' sister company was founded to provide programming services and support to AV system integrators. After learning the best and worst practices of the AV industry, the founders recognized the need for turn-key solutions and full support. They formed Profound Technologies in 2008 as an audio visual integration company, providing programming, design, engineering, and installation services.

## Technology Partnership

With customer experience as the highest priority, Technology Partnership means that Profound Technologies joins with customers to understand their unique needs, build a trusting business relationship, and collaborate with them on the perfect solution for their situation.

## Collaboration Solutions

While some rooms require customized room solutions, many customers desire room packages with a fast and standard deployment that have the familiar feel of their preferred video conferencing platform. Through their standard room packages, Profound Technologies offer a reliable and easy to use meeting experience for any room size.

## Profound Simple

For both custom and standardized projects, Profound Technologies incorporates the top technologies in the industry and their own intuitive design to uphold their value of Profound Simple — an experience where the customer interacts with technology that is high-quality, reliable, and easy to showcase our simple solutions, both locations have an Experience Center to offer a hands-on demo experience for our clients.

## Growing Still

Profound Technologies continues to develop new product ideas and solutions to better meet the collaboration needs of their clientele. With two primary offices and several satellite locations, their A team of passionate technology professionals are highly equipped to deliver customer solutions. The partners' investment in company culture and important charitable causes carve the path for the company to make a profound difference in the lives of their team members, customers, and the community as a whole.
